

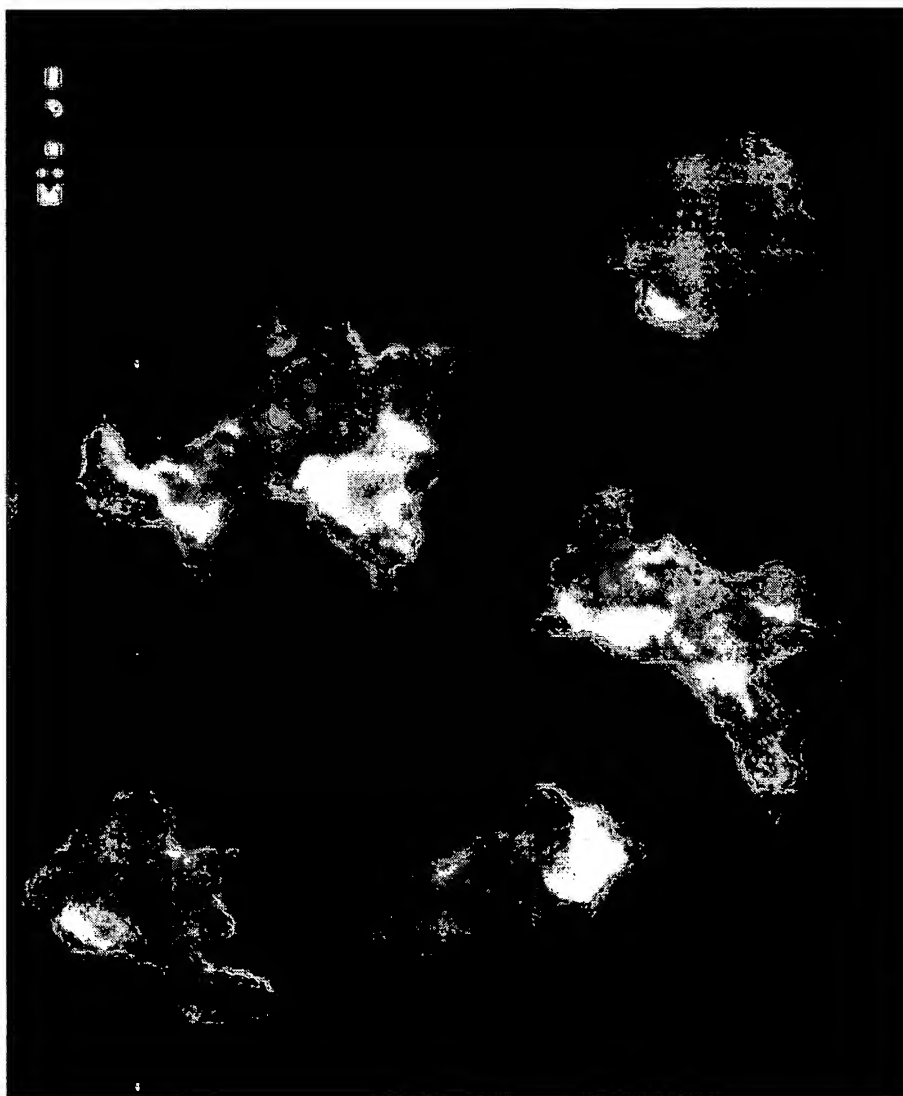

FIGURE 1

Pellet formed by UA787 on OPM

**Fine structure of the pellet of UA787, displaying the biofilm
observed in submerged culture on OPM**

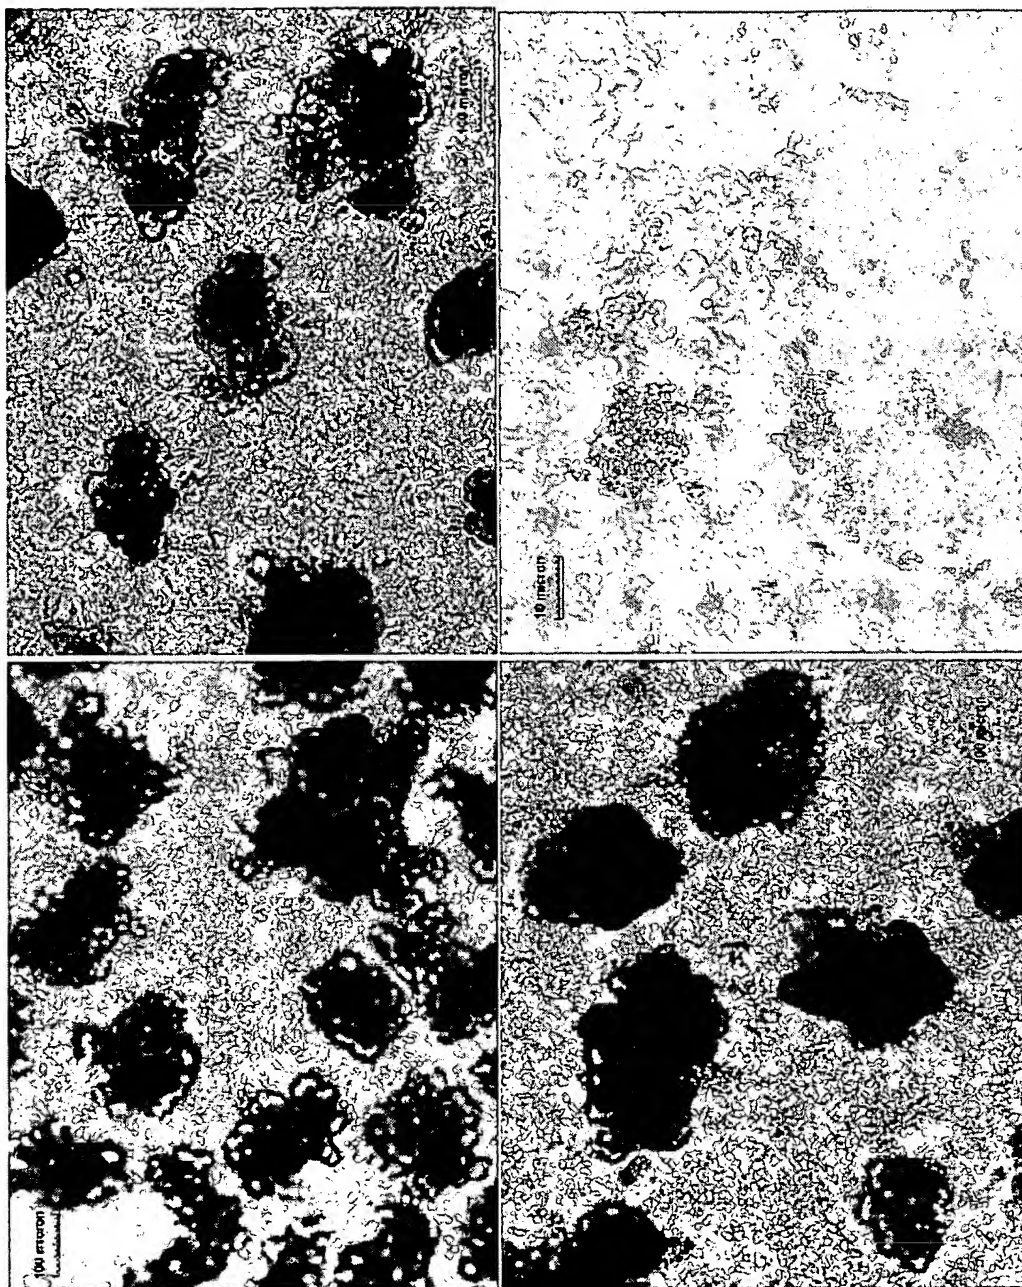

FIGURE 2

Summary on media selection for submerged mutacin I & III

- **Start Media used:** TH, TSB, TSBY, CDM, but no production was observed
- **OPM medium favors mutacin I & III production in submerged culture**
 - **Petri dish culture:** comparable to other media
 - **Liquid Culture:** Mutacin I/III at 64000 AU/ml
